About me

I'm currently 21 and I live and study in Bologna.

I'd love to work as programmer after the degree, hopefully in a major company mainly to understand the mechanism behind a wide company and learn from my colleagues.

I'm particularly interested in taking a deeper dive in Game development and Machine Learning.

I hope to work abroad, especially in northern Europe, in the near future.

EXPERIENCE

Assistant accountant – Taddei S.p.a. (2019 > Present)

I worked at this company for two year during the summer period due to their increased workload caused by the nearby Rimini (a well-known touristic locality). My main duties were to register invoices and transport documents, also I kept contacts especially with clients, commercial agents and warehouse. I also kept some sporadic relations with bank delegates and suppliers

Waiter – Parcoverde W&F S.r.l. (2016 > 2019)

I started working here at 17, during school's period I worked only from Firday to Sunday, while in summer or during holiday time I worked full week (7/7). I mainly learned to relate to other people (that in my case were, almost always, 20 years older than me) as well as the classic waiter ability. In the last years I became the head waiter due to my ability to organize my colleagues work and to cooperate with them to achieve a clean and peaceful service.

EDUCATION

University of Bologna (2018 > 2021)

I'm currently studying Computer Science (Bachelor's degree) with a GPA of 25.12/30 I plan to graduate before March 2022.

The degree courses list can be found [here](#).

Economic High School (2013 - 2018)

I studied from the basics to more advanced concepts of Economy, Accounting and Political and Financial sciences.

I studied both German and English which I know fairly good, I got the Cambridge First Certificate, in 2018, with 179/190 points, at 180 points I'd have gotten the C1 Certificate (Cambridge Advanced).
